# **A MEASURABLE DIFFERENCE...**

The Indiana Quality Assurance Builder Standards provide, for the first time ever, new homebuyers and remodeling customers a way to measure their builder and the project against an industry approved set of standards.

These Standards have been developed as a service to new home consumers and remodeling customers.

These Standards create a series of performance standards that builders and customers can use to communicate and understand each other's expectations regarding building/remodeling projects.

The Standards address the most prevalent issues that arise between the builder and the customer before the project, during the project, and, most importantly, after the project is completed. All too often it is the unrealized or undiscovered expectations that create the majority of the problems encountered in the building/remodeling process. The Standards will help eliminate these problems before the project even begins.

The Indiana Quality Assurance Builder Standards provide you with the confidence that professionals in the industry are handling your project. Make sure your builder or remodeler is a member of the Home Builders Association of Saint Joseph Valley and is a Standards Builder and/or Standards Remodeler.
